| FRECKLES |  |  |  |  |

## analysis questions

1) What are the odds that your child will be a boy?
2) Which parent determines the sex of the child?
3) Which traits are codominant or incompletely dominant? (These traits don't have a clear dominant or recessive, the heterozygous condition shows a "blending" or a "middle" condition). List at least three.
4) Why did you have to flip the coin multiple times to determine hair and eye color?
5) What are the possible genotypes of the parents of a child who has wavy hair (Hh)?
6) There have been cases in history where a king has divorced his queen because she produced only daughters. What should the queen say in her defense?
