Habitat vs. Niche

You can think of an organism's **niche** as its “role” or “job” in the community. By contrast, a **habitat** is simply the type of place where an organism or species normally lives.

Based upon this information, label each of the following as describing a habitat or a niche.

1. **Frog under a log**
 2. **Yearly migration of butterflies.**
 3. **Horse eats grass.**
 4. **Bat in a cave.**
 5. **Moths mate in early summer.**
 6. **Snake in a hole.**
