

# Warm up

Identify the following statement as TRUE or FALSE.  
If FALSE, change it to make the statement TRUE.

1. Water molecules are polar, with the oxygen side being slightly positive and the hydrogen side being slightly negative.
2. The nucleus is made of protons and electrons.
3. A substance that accelerates the rate of a chemical reaction is called a catalyst.
4. An organic compound is one that contains carbon.
5. The cohesion of water is caused by hydrophobic bonds.
