

# WARM UP

Fill in the missing cells in the table.

Type of Biomolecule	Components of the Biomolecule	Monomers (subunits) of the Biomolecule	Function of the Biomolecule
Carbohydrates		Monosaccharides (subunit for polysaccharides)	
Lipids	Mostly carbon & hydrogen, some oxygen	none	
Proteins			Transports substances, controls reactions, main component in cell membrane, helps with movement
Nucleic acids	C, H, O, N, P
